“RRT COMMISSIONS CRT RECYCLING SYSTEM FOR CRA”

Vista, California, September 3, 2003: RRT Design & Construction (RRT) has completed the installation of its new CRT recycling system for Computer Recyclers of America. This highly effective system is unique in its ability to process whole CRT, VDT and TV tubes into separate glass and metal products.

Computer Recyclers of America (CRA), headquartered in Vista, CA, is one of few facilities in California to de-manufacture and recycle the cathode ray tubes (CRT) found in computer monitors, televisions and other video equipment. “The benefit of having the RRT equipment means that we can efficiently process materials to the specifications of the various markets. This is the best way to access the highest paying markets for monitor components, thus reducing costs for our clients,” said CRA Owner and CEO Bob Erie. “Thanks to our new system, we can offer our clients competitive pricing.”

CRA, with this new RRT system, is only the second company in California to be approved by the California Environmental Protection Agency (CalEPA) and the California Department of Toxic Substance Control (DTSC) as an authorized outlet to recycle and crush CRT glass. For further information, visit CRA at www.crasd.com.

RRT offers this CRT recycling system as well as other environmentally friendly solutions to e-scrap recycling.

RRT prides itself in being able to provide each of its customers a solution to their unique needs. RRT recycling experts and engineers work to create business plans and solutions that are affordable, cost justifiable, and profitable. “There are so many different approaches to processing e-scrap and so many different types of “end-of-life” equipment that no single approach or system will work for everyone,” said Nat Egosi, President of RRT.

“We are very proud to be able to provide CRA with this environmentally sound, safe and profitable technology and wish them continued success.”

RRT Design & Construction, located in Melville, New York, is a leading provider of professional services and systems for technologically advanced recycling. Visit us on the web at www.rrtenviro.com.
